The closest prior art of record (Vaid and Ellessen) fails to teach or suggest the determination made by each edge device whether the health and status information is to be transmitted to the policy server according to condition set by the policy server, and that the policy server provides centralized reporting venue for the transmitted health and status information, and that the health and status information of each edge device includes resources usage statistics as specified in the amended claim 1.

Art Unit: 2143

Claim 9 is allowed because the prior art of record fails to teach or suggest the testing steps, by the first and second edge devices, against at least one test condition established by the policy server, as to whether to transfer the first and second health and status information to a log collecting and archiving module maintained at the policy server; the step of periodically receiving, at the policy server, the first health and status information from the first edge device and the second health and status information from the second edge device; the step of storing at the policy server, the first health and status information and the second health and status information in an archive database; and the step of creating via the policy server, reports based on the first and second health and status information, as specified in the amended claim 9.
